

Amadeus Reservation Guidelines

PNR Creation

- Do not make modifications / additions into the Amadeus PNR until Airline Record Locator is reverted.
- Similarly, wait for airline record locator before cancelling and creating a new PNR for same flights/passenger details.
- Do not ignore the remarks sent by airlines in SSR/OSI formats (regarding Time Limit, Minimum Connecting Time, Duplicate Bookings, etc.) and abide by the same.

Name Change

- Name Change is generally not allowed by the Airlines. In case still required, contact the respective airline for necessary approval.
- Do not use fictitious passenger names to block space to facilitate future booking requests.

Dupe PNRs / PNR modification

- When a PNR is made on the Amadeus and subsequent changes are made with the carrier (Non-Amadeus User airline) directly, the PNR gets localized. In such cases, further updates made on the CRS may not reach the Airline. Therefore, all subsequent changes should be made with the Airline directly and not on the System. Alternatively, request the airline to generate a TK message with the segment added by airline in their system to keep both Amadeus and airline PNR in synch.
- Do not create multiple trips in the same PNR as it may be considered a **duplicate booking** in the airline's system. Some airlines consider multiple un-ticketed bookings also as DUPE SPACE HOLDING and hence are likely to raise ADMs for the same.
- In case of a multiple-carrier itinerary, never Modify/Split/Cancel an Amadeus PNR unless the record locators for ALL Airlines are received on the 1A PNR.
- Certain carriers do not allow using the same PNR in case PAX was no-show. Therefore, create new PNR to issue/re-issue the ticket for a NO-SHOW PAX.
- Certain carriers do not allow changes in existing PNR and give the prompt for waitlist closed while saving the segments. In such cases, contact the respective carrier directly to add the segment and request them to send "TK" on Amadeus system to synchronize the itinerary with 1A PNR.
- Do not cancel the PNR where passenger has already checked-in on a flight, as many Airlines do not allow the cancellation on C (Checked-In) status and consider the Passenger as No-Show. In such cases, get a passenger De-Checked from Airlines and after Ticket status gets changed to O (Open), cancellation should be performed in system.
- Do not cancel an HL (Waitlist) segment and rebook the same flight as HK (Confirmed) in one transaction as it may cause over-lapping of transaction, further leading to rejection in the airline's system.

News Flash

It is recommended to do this in 2 separate transactions. That is, save the cancellation (of HL Segment) first and then after a few minutes, add the new segment (with HK Status).

- When making last minute bookings or changes, ensure Record Locator Return in the PNR and ticket numbers are present prior to the flight going under airport control (depends on airline access level).
- Do not override Minimum Connection Time warning at end of transaction (ER/ET). Look for alternative connections instead. Also, verify with the respective carrier(s) that the actual connecting time is sufficient.
- Do not use any of these special characters/symbols (*;:, # \$?) in AP, OSI & SSR fields in the PNR. They are not recognized by the airlines systems, hence the provided information may be rejected upon transmission.
- Never rebook a flight which has already been rejected as HX, UN, NO or UC status. If an airline has rejected the segment once they are not obliged to send a second rejection to the same segment.
- SB / FXB Entry should be used for Amadeus Access Carriers only and for others, advice agents to cancel the segments not required, save the transaction and then add new segments. Else, the PNR may get corrupted and lead to NOREC.
- To remove all inactive segments having status codes HX/NO/UC in a PNR, perform RFX; ERK (XX is your name).
- A Keyword Element (SK) in the PNR that contains special information should be only added after Airline's consent.

Churning

Churning refers to repeated canceling and rebooking of same itinerary in the same or different classes of service across one or more PNRs or GDS/CRSs.

- Do not cancel and rebook the itinerary within the same or next minute in New PNR as it may lead to NOREC in new PNR. In case required, verify that old PNR is cancelled successfully at Airline's end and then only proceed with the New PNR creation on Amadeus.
- Note, multiple cancellation and creation of different PNRs for same passenger may be considered as CHURNING and so may raise ADM.
- Do not cancel and rebook segments for the purpose of extending the airline's Ticket Time Limit (TTL) as it is considered system abuse by carriers and may result in a PNR cancellation by the carrier. And, further may lead to ADMs for CHURNING.
