

## News Flash

**Ticketing Arrangement - Automatic Cancellation (TKXL)**

A ticketing arrangement element (TK) must be included in the PNR to indicate the status of ticket issuance of all the passengers in the PNR.

Action Identifiers like TKOK is used to indicate a ticket has been issued, TKTL for queue placement and, TKXL for automatic cancellation.

TKXL allows the system to automatically cancel the itinerary based on the date, and time, entered in the TK element.

The date entered must be later than, or equal to, the current date. If current date is mentioned, a time of at least 5 minutes later must also be entered. The time and date entered cannot be later than the departure time and date of the first air segment in the PNR.

**Note:** TKXL changes to TKOK at ticketing, however, in case of simultaneous transactions on the same PNR, TKXL may not change to TKOK. We recommend to change TKXL to TKOK manually to avoid auto cancellation of the PNR.

**Illustration I**

Considering current date & time is 17JUN18, 1319hours, system accepts the TKXL for 1325hrs for same date.

DEL TIME IS 1320/0120P ON SUN17JUN18
```

**News Flash****Illustration II**

The maximum action time of TKXL element will no longer exceed the departure time of first air segment in PNR.

Warning INVALID TICKETING DATE will be generated on end of transaction (ET or ER), in case the time mentioned in TKXL is after the departure time of first air segment.

In the below shared example, flight departs at 0600hrs on 19DEC and TKXL is 19DEC / 0601hours.
