

Enhancement to TST Display through a separator (-) between Tax amount and Tax code.

Dear Travel Partner,

IATA introduces a tax code format which includes combinations of alphanumeric values in addition to the current alpha/alpha codes. To support this Industry mandate, Amadeus is pleased to announce a new enhancement related to Cryptic TST display, Panel TST display, and TST modification. This new enhancement is to separate the tax code from its matching amount by adding a hyphen and will now display a symbol dash “-” between each of the Tax amount and tax code.

Key Features:

In order to facilitate the reading of taxes information included in the TST display, the responses of the following entries have been adapted to include a dash (-) between the tax amount and its matching tax code:

- TQT (Cryptic and Panel TSTs): Display a TST
- TQN: Display a TST with a negotiated fare
- TTH: Display TST history
- TTA: add Passenger to TST
- TTS: Split Passenger from TST
